STORY MAPPING EXAMPLE

Review this user story mapping example for an e-mail system that allows user to organize & manage email, manage calendar and manage contacts. Use this example to grasp the concept of mapping user stories and to use this learning in the below activity.

Here are some benefits of user story mapping:

- Decide on what to build first
- Build product or feature using an iterative approach
- Planning releases at a high level
- Prioritizing the product backlog
- Having an open approach to supporting goals and activities

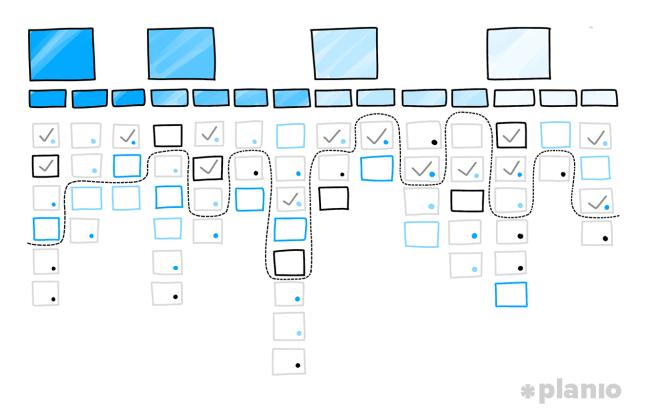

USER STORY MAPPING ACTIVITY INSTRUCTION

NOTE: Use this template below or utilize tools of your own (notepad, whiteboard, sticky notes, etc.)

For this activity,

- 1. Brainstorm and write down the tasks (3-5) that needs to go under each of the activity (blue boxes).
- 2. Once you have those 3-5 tasks on each column, rearrange them with the highest priority activity to the top of the column.
- 3. Consider a workflow that will provide value to your user (student taking online course in this case)
- 4. Create a release or increment.
